

TARUN KRISHNA

Azure DevOps Engineer

+91-9597176872 | krishtarun2001@gmail.com | linkedin.com/in/tarun-krish | github.com/Krish200122 | Bangalore, Karnataka, India

PROFESSIONAL SUMMARY

Azure DevOps Engineer with 3.5+ years designing and operating secure, multi-tenant **CI/CD pipelines** and **Infrastructure-as-Code** on **Azure**. Specialized in **hub-and-spoke network architecture**, private cloud integration platforms, automated infrastructure provisioning, and **Kubernetes**-based container orchestration. Reduced deployment time by **67%**, improved release success rate from 78% to **97%**, cut infrastructure provisioning workload by **70%**, and maintained **99.9% uptime**. **Azure DevOps Engineer Expert (AZ-400)** and **Azure Developer Associate (AZ-204)** certified.

TECHNICAL SKILLS

CI/CD & DevOps: Azure DevOps Pipelines, GitHub Actions, Jenkins, Multi-stage YAML, Release Gates, Self-Hosted Agents, Artifact Management

Azure Services: App Services, Functions, Logic Apps, AKS, ACR, APIM, Container Apps, Service Bus, Key Vault, Azure SQL, Application Insights

Infrastructure-as-Code: Bicep, Terraform, ARM Templates, JSON-driven Provisioning

Networking & Security: VNet Peering, Private Endpoints, Private DNS Zones, NSG, RBAC, Key Vault, SAST/Vulnerability Scanning, SOC 2 Compliance

Containers & Orchestration: Kubernetes (AKS), Docker, Helm, KEDA, Container Apps Jobs, HPA

Monitoring & Observability: Azure Monitor, Log Analytics, Grafana, Prometheus, PagerDuty, Alert Rules

Scripting: Bash, PowerShell, Python, JSON, YAML

PROFESSIONAL EXPERIENCE

Tamuinfotech OPC Private Limited — Madurai, India

Azure DevOps Engineer (Promoted) | Jan 2024 – Present

- Architected and deployed multi-tenant SaaS infrastructure using **Azure DevOps pipelines** with **JSON-driven auto-provisioning** of Functions, Logic Apps, App Services, and Storage, cutting new customer onboarding from 3 days to **2 hours**.
- Spearheaded a DevOps security transformation across all CI/CD pipelines by integrating **SAST**, **vulnerability scanning**, and **Azure Key Vault** with **RBAC**, achieving **SOC 2 compliance** on **100%** of pipelines for 6+ consecutive months.
- Built and maintained a centralized **Infrastructure-as-Code** module library (**Bicep**, **Terraform**) covering Functions, Logic Apps, Service Bus, and **AKS**, adopted company-wide and cutting infrastructure setup time by over **80%**.
- Designed private, **VNet-isolated** deployment architecture with **self-hosted Azure DevOps agents**, automated **VNet peering**, and **private DNS resolution** to support secure multi-customer environments.
- Mentored junior DevOps engineers on **CI/CD pipeline design**, **Infrastructure-as-Code** best practices, and secure cloud architecture patterns.

DevOps Engineer (CI/CD Pipelines & Infrastructure) | Jan 2023 – Dec 2023

- Designed, built, and maintained **15+ production CI/CD pipelines** using **Azure DevOps** and **GitHub Actions** across 4 SaaS tenants, cutting average deployment time from 45 to 15 minutes (**67% faster**) and manual errors by **60%**.
- Provisioned and operated **AKS Kubernetes clusters** with **Docker** containerization, **Helm** deployments, and **Horizontal Pod Autoscaling**, maintaining **99.9% infrastructure uptime** for 12 consecutive months while cutting cluster costs by **30%**.
- Built centralized observability and monitoring infrastructure using **Azure Monitor**, **Log Analytics**, **Grafana**, and **Prometheus** with **50+ configured alert rules**, reducing incident detection time by **35%**.
- Implemented **release gates**, **multi-stage YAML pipelines**, and **artifact management** practices, improving release success rate from 78% to **97%** and enabling a **3x increase** in release frequency per sprint.

KEY PROJECTS

Project 1: Multi-Customer Azure Integration Services Platform

Tech Stack: Azure Bicep, Azure DevOps Pipelines, Container Apps Jobs, KEDA, APIM, Logic Apps Standard, Function Apps, Private Endpoints, VNet Peering, Private DNS Zones, ACR, Key Vault, Service Bus

- Architected a secure **hub-and-spoke Azure platform**, migrating publicly exposed **Logic Apps, Function Apps, Key Vault**, and **Service Bus** to fully private, **VNet-isolated infrastructure with zero public exposure**.
- Designed a shared hub repository (private **ACR, APIM, self-hosted agent**) and per-customer spoke repositories with automated **VNet peering**, enabling one shared agent/APIM instance to serve unlimited customers without infrastructure duplication.
- Built a **self-hosted Azure DevOps agent** on **Container Apps Jobs** with **KEDA event-driven autoscaling** that scales to zero when idle and activates on-demand to deploy inside private VNets, eliminating idle compute cost.
- Deployed **APIM in External VNet mode** as the single secure gateway for external systems, backed by a shared **private DNS zone strategy** for cross-customer resolution of private endpoints.
- Reduced new customer onboarding to a single parameter file and pipeline run, automating **VNet peering, private endpoints, DNS registration**, and **RBAC with zero manual configuration**.

Project 2: Automated Infrastructure Provisioning & Secure CI/CD Pipeline

Tech Stack: Bicep, Terraform, Azure DevOps, Azure Key Vault, RBAC, SAST

- Replaced a fully manual, portal-based infrastructure provisioning process with automated **Infrastructure-as-Code pipelines**, eliminating configuration drift and manual setup errors.
- Designed secure **CI/CD pipelines** integrating **RBAC, Key Vault secrets management**, and automated **security scanning**, cutting manual provisioning and deployment workload by **70%**.
- Achieved **SOC 2 compliance** across **100%** of pipelines and mentored junior engineers on **IaC best practices** and secure pipeline design.

CERTIFICATIONS & EDUCATION

- Microsoft Certified: Azure DevOps Engineer Expert (AZ-400)
- Microsoft Certified: Azure Developer Associate (AZ-204)

Bachelor of Commerce (B.Com), Information Technology — The American College, Madurai, India | 2019 – 2022
