

TARUN KRISHNA

AWS DevOps Engineer

+91-9597176872 | krishtarun2001@gmail.com | linkedin.com/in/tarun-krish | github.com/Krish200122 | Bangalore, Karnataka, India

PROFESSIONAL SUMMARY

AWS DevOps Engineer with 3.5+ years designing and operating secure, multi-tenant **CI/CD pipelines** and **Infrastructure-as-Code** on **AWS**. Specialized in **hub-and-spoke VPC network architecture**, **Terraform-based infrastructure automation**, and container-based application deployment. Reduced deployment time by **67%**, improved release success rate from 78% to **97%**, cut infrastructure provisioning workload by **70%**, and maintained **99.9% uptime**.

TECHNICAL SKILLS

CI/CD & DevOps: AWS CodePipeline, CodeBuild, CodeDeploy, Jenkins, GitHub Actions, Multi-stage Pipelines, Self-Hosted Runners, Artifact Management

AWS Core Services: EC2, Lambda, API Gateway, ECS Fargate, EKS, S3, RDS, CloudFront, Route 53

Networking & Security: VPC, Transit Gateway, VPC Peering, PrivateLink, Security Groups, NACLs, IAM, Secrets Manager, SAST/Vulnerability Scanning, SOC 2 / HIPAA-aligned Compliance

Infrastructure-as-Code: Terraform (Modules, Remote State, Workspaces), CloudFormation, JSON/YAML-driven Provisioning

Containers & Orchestration: Docker, ECS Fargate, EKS (overview), Auto Scaling, ECR

Monitoring & Observability: CloudWatch, Grafana, Prometheus, PagerDuty, Alert Rules

Scripting: Bash, Python, JSON, YAML

PROFESSIONAL EXPERIENCE

Tamuinfotech OPC Private Limited — Madurai, India

AWS DevOps Engineer (Promoted) | Jan 2024 – Present

- Architected and deployed multi-tenant SaaS infrastructure using **AWS CodePipeline** with **Terraform-driven auto-provisioning** of **Lambda**, **API Gateway**, **ECS**, and **S3**, cutting new customer onboarding from 3 days to **2 hours**.
- Spearheaded a DevOps security transformation across all CI/CD pipelines by integrating **SAST**, **vulnerability scanning**, and **AWS Secrets Manager** with **IAM**, achieving **SOC 2 compliance** on **100%** of pipelines for 6+ consecutive months.
- Built and maintained a centralized **Terraform module library** covering **Lambda**, **API Gateway**, **SQS**, and **ECS/EKS** resources, adopted company-wide and cutting infrastructure setup time by over **80%**.
- Designed a private, **VPC-isolated deployment architecture** with **self-hosted CI/CD runners**, automated **Transit Gateway/VPC peering**, and **Route 53 private DNS resolution** to support secure multi-environment deployments.
- Mentored junior DevOps engineers on **CI/CD pipeline design**, **Infrastructure-as-Code** best practices, and secure cloud architecture patterns.

DevOps Engineer (CI/CD Pipelines & Infrastructure) | Jan 2023 – Dec 2023

- Designed, built, and maintained **15+ production CI/CD pipelines** using **Jenkins** and **GitHub Actions** across 4 SaaS tenants, cutting average deployment time from 45 to 15 minutes (**67% faster**) and manual errors by **60%**.
- Provisioned and operated **ECS Fargate** and **EKS clusters** with **Docker** containerization and **Auto Scaling**, maintaining **99.9% infrastructure uptime** for 12 consecutive months while cutting cluster costs by **30%**.
- Built centralized observability and monitoring infrastructure using **CloudWatch**, **Grafana**, and **Prometheus** with **50+ configured alert rules**, reducing incident detection time by **35%**.
- Implemented **release gates**, **multi-stage pipelines**, and **artifact management** practices, improving release success rate from 78% to **97%** and enabling a **3x increase** in release frequency per sprint.

KEY PROJECTS

Project 1: Multi-Environment Medical Application Platform — Hub-and-Spoke AWS Architecture

Tech Stack: AWS Transit Gateway, VPC Peering, Route 53 Private Hosted Zones, API Gateway, ECS Fargate, PrivateLink, Secrets Manager, IAM

- Architected and deployed a secure, multi-environment **AWS platform** for a medical application using a **hub-and-spoke VPC topology**, connecting a central hub VPC to per-environment spoke VPCs via **Transit Gateway** and eliminating **public exposure** of backend services.

- Migrated publicly accessible application and database endpoints into fully private, **VPC-isolated subnets**, with all cross-environment traffic routed through the hub via **Transit Gateway** and **PrivateLink**.
- Deployed **self-hosted CI/CD build agents** inside the hub VPC with private connectivity to spoke environments, removing reliance on public internet-facing build infrastructure.
- Implemented **Route 53 Private Hosted Zones** for centralized DNS resolution across all environments, and exposed application APIs through a single **API Gateway** endpoint with private **VPC Link integration**.
- Containerized application services on **ECS Fargate** for scalable, environment-isolated deployments, with centralized secrets and access managed through **AWS Secrets Manager** and **IAM**.
- Standardized environment provisioning through parameterized **Terraform modules**, reducing new environment setup to a single pipeline run with **zero manual configuration**.

Project 2: Terraform Infrastructure-as-Code — Centralized Modules & Remote State Management

Tech Stack: Terraform, AWS ECR, S3, DynamoDB, IAM

- Built a centralized, reusable **Terraform module library** covering **VPC**, compute, **ECR**, and **IAM** resources, standardizing infrastructure provisioning across all environments.
- Provisioned and managed a centralized **Amazon ECR registry** for container image storage and versioning, integrated with **CI/CD pipelines** for automated build-and-push workflows.
- Designed per-environment **Terraform state isolation** using dedicated **S3 backends** for each environment, alongside a centralized state bucket for shared/core infrastructure.
- Implemented **DynamoDB-based state locking** to prevent concurrent state modifications and eliminate deployment conflicts across teams working on shared infrastructure.
- Replaced manual, console-based provisioning with fully automated, version-controlled **Terraform deployments**, cutting infrastructure provisioning workload by **70%**.

EDUCATION

Bachelor of Commerce (B.Com), Information Technology — The American College, Madurai, India | 2019 – 2022
