PROFESSIONAL SUMMARY

Azure Integration Specialist with 3.5+ years designing and delivering secure, event-driven **Azure integration solutions** connecting **ERP, EDI**, and enterprise applications. Specialized in **Azure Logic Apps, Azure Service Bus** messaging patterns, **API Management**, and **Infrastructure-as-Code** across multi-environment deployments. Delivered automated **XML/JSON data transformation** pipelines, cut infrastructure setup time by **80%**, and achieved **SOC 2 compliance** on **100%** of integration workflows. **Azure DevOps Engineer Expert (AZ-400)** and **Azure Developer Associate (AZ-204)** certified.

TECHNICAL SKILLS

Integration & Messaging: Azure Logic Apps (Standard & Consumption), Azure Service Bus, Azure API Management, Azure Functions, Event Grid

Data Transformation & Mapping: XSLT (XML-to-XML), Liquid (JSON-to-JSON), EDI/UBL Message Formats, Content-Based Routing

Azure Data & Storage: Cosmos DB, Azure SQL, Blob Storage, Table Storage

Infrastructure-as-Code: Bicep, Terraform, ARM Templates, Multi-Environment Deployments (Dev/Acceptance/Prod)

CI/CD & DevOps: Azure DevOps Pipelines, GitHub Actions, Release Gates, Multi-stage YAML

Security & Governance: Azure Key Vault, RBAC, Managed Identity, SOC 2 Compliance

Monitoring & Observability: Azure Monitor, Application Insights, Log Analytics

Scripting: Bash, PowerShell, Python, JSON, YAML, XML

PROFESSIONAL EXPERIENCE

Tamuinfotech OPC Private Limited — Madurai, India

Azure DevOps Engineer (Promoted) | Jan 2024 – Present

- Designed and deployed **Azure integration workflows** using **Logic Apps** and **Azure Functions** to automate multi-tenant SaaS provisioning, connecting Functions, App Services, and Storage into a unified, **event-driven** onboarding pipeline.
- Built secure, message-driven integrations using **Azure Service Bus** and **API Management**, enabling reliable data exchange between internal microservices and third-party systems.
- Implemented centralized secrets and access management using **Azure Key Vault** and **RBAC** across all integration pipelines, achieving **SOC 2 compliance** on **100%** of workflows.
- Delivered **Infrastructure-as-Code** using **Bicep** and **Terraform** for Logic Apps, Function Apps, and Service Bus resources, reducing environment setup time by over **80%**.
- Mentored junior developers on **Azure integration patterns**, **event-driven architecture**, and **Infrastructure-as-Code** best practices.

DevOps Engineer (CI/CD Pipelines & Integration Delivery) | Jan 2023 – Dec 2023

- Designed and maintained CI/CD pipelines supporting deployment of **Azure Functions** and **Logic Apps**-based integration solutions across 4 SaaS tenants, cutting deployment time by **67%**.
- Built and operated containerized integration services on **AKS**, supporting scalable processing of high-volume message workloads.
- Implemented observability for integration workflows using **Azure Monitor**, **Log Analytics**, and **Application Insights**, reducing incident detection time by **35%**.
- Supported integration release processes with **release gates** and staged deployments, improving release success rate from 78% to **97%**.

KEY PROJECTS

Project 1: Enterprise EDI & ERP Integration

Tech Stack: Azure Logic Apps Standard, Azure Service Bus, XSLT, Cosmos DB, Blob Storage, Azure SQL, Bicep

- Designed and developed end-to-end **Azure integration workflows** using **Azure Logic Apps Standard** to automate **EDI invoice processing** between trading partners and **ERP systems**.

- Implemented **XML-to-XML transformations** using **XSLT** to map EDI messages (**UBL format**) into ERP-compatible formats, ensuring accurate cross-system data exchange.
- Built **event-driven architecture** using **Azure Service Bus** with **topic-subscription routing**, **content-based message filtering**, and **publish-subscribe patterns**.
- Integrated **Azure Cosmos DB** for product data enrichment, **Azure Blob Storage** for file-based triggers, and **Azure SQL** for business event persistence.
- Delivered **Infrastructure-as-Code** using **Bicep** across dev, acceptance, and production environments, ensuring consistent, repeatable deployments.

Project 2: Cloud Integration Platform Development

Tech Stack: Azure Functions, Azure Logic Apps, Liquid, XSLT, Azure Service Bus, Azure Storage, Cosmos DB, Azure SQL

- Developed scalable **cloud integration solutions** using **Azure Functions** and **Azure Logic Apps** to automate business processes and connect enterprise applications.
- Built **serverless APIs** and **event-driven workflows** handling data transformation between systems using **JSON-to-JSON (Liquid)** and **XML-to-XML (XSLT)** mapping.
- Implemented **Azure Service Bus** messaging patterns including **dead-letter handling**, **retry policies**, and **subscription-based message routing**.
- Worked with **Azure Storage**, **Cosmos DB**, and **Azure SQL** for data enrichment and persistence across integration workflows.
- Followed **integration best practices** including error handling, monitoring, and logging across all workflows, improving reliability and traceability.

CERTIFICATIONS & EDUCATION

- Microsoft Certified: Azure DevOps Engineer Expert (AZ-400)
- Microsoft Certified: Azure Developer Associate (AZ-204)

Bachelor of Commerce (B.Com), Information Technology — The American College, Madurai, India | 2019 – 2022
