PROFESSIONAL SUMMARY

Azure DevOps Engineer and Cloud Integration Developer with 3+ years of experience architecting scalable CI/CD pipelines, cloud infrastructure, and multi-tenant SaaS solutions on Microsoft Azure and AWS. Deep expertise in Azure-native services (Function Apps, Logic Apps, App Services, AKS) and AWS deployments (ECS Fargate, EC2, RDS, S3, Route 53, VPC). Designed a company-wide multi-customer onboarding automation framework — enabling new tenants to provision infrastructure and deploy Logic Apps and Function Apps automatically from customer requirements. Proven track record of reducing deployment time by 40% and improving release reliability by 60% through automation, DevSecOps practices, and infrastructure-as-code.

CORE TECHNICAL SKILLS

CI/CD Pipelines	Azure DevOps, GitHub Actions, Jenkins, Multi-stage YAML, Release Gates, Artifact Management, Pipeline Optimization
Azure Services	App Services, Azure Functions, Logic Apps, Azure SQL, Azure VMs, Azure Storage, Container Registry (ACR), Service Bus, API Management
AWS Services	EC2, ECS Fargate, S3, RDS (MySQL), Route 53, CloudWatch, SES, VPC, Subnets, Internet Gateway, NAT Gateway, Load Balancers
Infrastructure as Code	Terraform, Bicep, ARM Templates, Azure Resource Manager, CloudFormation
Containers & Orchestration	Docker, Kubernetes / AKS, Helm, Horizontal Pod Autoscaling
Security & Compliance	Azure Key Vault, HashiCorp Vault, RBAC, DevSecOps, SAST, Vulnerability Scanning, SOC 2
Monitoring & Observability	Azure Monitor, Log Analytics, Application Insights, CloudWatch, Prometheus, Grafana, PagerDuty
Multi-tenant SaaS	Automated customer onboarding, per-tenant IaC, Logic App deployment strategy, Function App lifecycle
Scripting	Bash, PowerShell, Python, YAML, JSON, Shell Scripting
Methodologies	Agile, Scrum, SDLC, Incident Management, Root Cause Analysis

PROFESSIONAL EXPERIENCE

Azure DevOps Engineer | Tamuinfotech

Jan 2023 – Present

Azure Infrastructure & CI/CD

- Designed and maintained **15+ multi-stage CI/CD pipelines** in Azure DevOps and GitHub Actions, reducing average deployment time from 45 min to under 15 min (67% improvement).
- Engineered end-to-end build, security scan, test, and release workflows, **slashing manual errors by 60%** and enabling 3× more frequent production releases per sprint.
- Architected a company-wide multi-customer (SaaS) onboarding framework**: new customer infrastructure — including Function Apps, Logic Apps, App Services, and storage — provisions automatically from a customer requirements template, eliminating manual setup entirely.
- Built and maintained **Logic App deployment pipelines** supporting multi-tenant SaaS scenarios — per-tenant workflow isolation, parameterized ARM/Bicep deployments, and automated rollback on failure.
- Developed reusable **Terraform and Bicep modules** for Azure Function Apps, Logic Apps, App Service Plans, and Service Bus, shrinking environment setup time from 3 days to under 2 hours.
- Administered Azure resources across dev, staging, and production: **App Services, Virtual Machines, Storage Accounts, Azure Functions, Logic Apps, and Container Registry (ACR)**.
- Hardened pipeline security** with Azure Key Vault and RBAC policies, removing all hardcoded credentials and achieving SOC 2 compliance across 100% of pipelines.

- Established observability with Azure Monitor, Log Analytics, and Grafana dashboards (50+ alert rules), driving a **35% decrease in MTTD**.

AWS Deployments & Architecture

- Deployed and architected 10+ applications on AWS**, spanning SaaS platforms and standard web applications across multiple accounts and environments.
- Designed **VPC network architecture** — public/private subnets, Internet Gateways, NAT Gateways, Security Groups, and NACLs — ensuring secure, scalable connectivity for all workloads.
- Containerized and deployed microservices on ECS Fargate**, using ECR for image management and ALB for traffic routing; eliminated server management overhead entirely.
- Architected **EC2-based application stacks** with Auto Scaling Groups, Launch Templates, and ALBs for high-availability deployments.
- Configured **RDS MySQL** instances with Multi-AZ, automated backups, and parameter groups; integrated with application tiers for persistent data storage.
- Set up **S3-based static hosting and artifact storage**, CloudFront distributions, and lifecycle policies for cost optimization.
- Route 53 DNS management** — hosted zones, A/CNAME/alias records, health checks, and failover routing policies across all production domains.
- Integrated **SES for transactional email** with DKIM/SPF configuration and CloudWatch alarms for bounce/complaint monitoring.
- Centralized **CloudWatch monitoring** with dashboards, metric alarms, and log insights queries for all AWS workloads.

Kubernetes & Containerization

- Provisioned and managed **AKS clusters** hosting containerized microservices via Docker and Helm, sustaining 99.9% uptime SLA.
- Implemented **Horizontal Pod Autoscaling (HPA)** and rolling update strategies with health-check-triggered rollback, handling traffic surges without performance degradation.
- Optimized AKS cluster resource usage by **30%** through node pool right-sizing and pod disruption budget configuration.
- Delivered zero-downtime releases** through AKS rolling updates, recording zero production outages across 12 consecutive months.

KEY PROJECTS

Multi-Tenant SaaS Onboarding Automation – Azure

Tech Stack: Azure DevOps, Bicep, Terraform, Logic Apps, Azure Functions, Key Vault, ARM Templates

- Architected an automated onboarding pipeline** that provisions complete per-customer Azure infrastructure (Function Apps, Logic Apps, App Services, Storage) from a JSON requirements template — new tenant go-live reduced from days to hours.
- Implemented **Logic App deployment strategy** supporting multi-SaaS-tenant isolation with parameterized pipelines and automated rollback.
- Enforced security and quality gates at every stage, recording **0 critical vulnerabilities** reaching production over 6+ months.

Enterprise CI/CD Automation Platform – Azure DevOps & GitHub Actions

Tech Stack: Azure DevOps, GitHub Actions, Docker, AKS, Bicep, Terraform, Azure Key Vault

- Architected a **5-stage pipeline (Code → Build → Test → Security Scan → Deploy)** for 4 production SaaS tenants, compressing release cadence from bi-weekly to daily.
- Achieved a **40% drop in deployment lead time** and lifted release success rate from 78% to 97% through pipeline tuning and environment parity.

AWS Multi-Application Architecture & Deployment

Tech Stack: ECS Fargate, EC2, RDS MySQL, S3, Route 53, CloudWatch, SES, VPC, ALB, NAT Gateway

- Deployed and architected 10+ applications** across SaaS and standard models; designed full VPC topology, ECS Fargate container clusters, and RDS MySQL database tiers.
- Configured Route 53 DNS, SES email infrastructure, and CloudWatch observability for all production workloads.

CERTIFICATIONS

- **Microsoft Certified: Azure DevOps Engineer Expert (AZ-400)**
- **Microsoft Certified: Azure Developer Associate (AZ-204)**

EDUCATION

Bachelor of Commerce (B.Com) – Information Technology | The American College, India | 2019 – 2022
