

TARUN KRISHNA

Azure DevOpsEngineer | CloudInfrastructure | CI/CDSpecialist

+91-9597176872 • krishtarun2001@gmail.com • linkedin.com/in/tarun-krishna • github.com/Krish200122

PROFESSIONAL SUMMARY

Azure DevOps Engineer with 3+ years of experience designing scalable CI/CD pipelines, cloud infrastructure, and containerized applications on Microsoft Azure. Proven track record of reducing deployment time by 40% and improving release reliability by 60% through automation, multi-stage pipelines, and DevSecOps practices. Skilled in Docker, Kubernetes (AKS), Terraform, Bicep, and GitHub Actions, with hands-on experience managing end-to-end build, release, and infrastructure workflows. Strong focus on high availability, zero-downtime deployments, and observability using Azure Monitor, Prometheus, and Grafana, ensuring consistent system performance and rapid incident resolution.

CORE TECHNICAL SKILLS

CI/CD Pipelines	Azure DevOps, GitHub Actions, Jenkins, Multi-stage YAML, Release Gates, Artifact Management, Pipeline Optimization
Cloud Platforms	Microsoft Azure (IaaS, PaaS, SaaS), App Services, Azure Functions, Azure SQL, Azure VMs, Azure Storage, Container Registry (ACR)
Infrastructure as Code	Terraform, Bicep, ARM Templates, Azure Resource Manager, Cloud Provisioning
Containers & Orchestration	Docker, Kubernetes, Azure Kubernetes Service (AKS), Helm, Microservices
Version Control	Git, GitHub, Azure Repos, Branching, Pull Requests, Code Review Workflows
Monitoring & Observability	Azure Monitor, Log Analytics, Application Insights, Prometheus, Grafana
Security & Compliance	Azure Key Vault, HashiCorp Vault, RBAC, DevSecOps, Vulnerability Scanning, Secure Pipelines, Secret Management
Scripting	Bash, PowerShell, Python, Shell Scripting, YAML, JSON
Operating Systems	Linux (Ubuntu, CentOS), Windows Server
Methodologies	Agile, Scrum, SDLC, Incident Management, Root Cause Analysis

PROFESSIONAL EXPERIENCE

Azure DevOps Engineer | Tamuinfotech

Jan 2023 – Present

- Designed and maintained 15+ multi-stage **CI/CD pipelines in Azure DevOps and GitHub Actions**, lowering average deployment time from 45 minutes to under **15 minutes (67% improvement)**.
- Engineered end-to-end build, security scan, test, and release workflows, slashing manual errors by 60% and enabling 3x more frequent production releases per sprint.
- Provisioned 5 Azure Kubernetes Service (AKS) clusters hosting 30+ containerized microservices via Docker and Helm, sustaining a **99.9% uptime SLA**.
- Authored reusable **Terraform and Bicep** modules for infrastructure-as-code provisioning, shrinking environment setup time from 3 days to under 2 hours.
- Administered Azure resources across dev, staging, and production: **App Services, Virtual Machines, Storage Accounts, Azure Functions, and Container Registry (ACR)**.
- Hardened pipeline security by integrating **Azure Key Vault with RBAC policies**, removing all hardcoded credentials and satisfying SOC 2 compliance across 100% of pipelines.
- Established observability with **Azure Monitor, Log Analytics**, and Grafana dashboards featuring 50+ alert rules, driving a 35% decrease in mean time to detect (**MTTD**) incidents.
- Delivered zero-downtime releases through AKS rolling updates and health-check-triggered rollback logic, recording zero production outages across **12 consecutive months**.

- Partnered with development, **QA, and infrastructure teams** to unify DevOps workflows, trimming new-service onboarding time by 50%.
 - **Embedded SAST** and container vulnerability scanning into CI pipelines, ensuring 0 critical findings reached production with full pipeline gate compliance.
-

KEY PROJECTS

Enterprise CI/CD Automation Platform – Azure DevOps & GitHub Actions

Tech Stack: Azure DevOps, GitHub Actions, Docker, AKS, Bicep, Terraform, Azure Key Vault

- Architected a 5-stage pipeline (**Code → Build → Test → Security Scan → Deploy**) for 4 production SaaS tenants, compressing release cadence from bi-weekly to daily.
- Implemented **infrastructure-as-code workflows** with Terraform and Bicep, eliminating 8+ hours of manual effort per deployment cycle.
- Enforced quality and security gates at every stage, recording 0 critical vulnerabilities reaching production over 6 months.
- Achieved a **40% drop** in deployment lead time and lifted release success rate from **78% to 97%** through pipeline tuning and environment parity.

Kubernetes Microservices Deployment & Observability Platform

TechStack:Kubernetes(AKS),Docker,Helm,AzureMonitor,Prometheus, Grafana

- **Migrated 12 microservices** into Docker containers and deployed on AKS with **Horizontal Pod Autoscaling (HPA)**, handling 3x traffic surges without performance degradation.
 - Constructed Grafana dashboards with 30+ panels and wired PagerDuty alert rules, lowering mean time to **resolve (MTTR) by 45%**.
 - Instituted rolling update strategies with health-check-triggered rollback, **sustaining 99.95%** uptime across 8 months of production operation.
 - Optimized AKS cluster resource **usage by 30%** through node pool right-sizing and pod disruption budget configuration.
-

CERTIFICATIONS

- Microsoft Certified: Azure DevOps Engineer Expert (AZ-400)
- Microsoft Certified: Azure Developer Associate (AZ-204)

EDUCATION

Bachelor of Commerce (B.Com) – Information Technology
The American College, India
