## SUMMARY

Results-driven Azure DevOps Engineer with 4+ years of hands-on experience in designing and automating CI/CD pipelines, managing cloud infrastructure, and implementing infrastructure as code (IaC) using tools like GitHub Actions, Azure DevOps, and Bicep. Proven track record of accelerating deployments by up to 60%, improving system reliability, and enabling scalable multi-tenant SaaS delivery in enterprise environments. Adept at collaborating with cross-functional teams to streamline operations, enforce security standards, and drive DevOps excellence at scale. Seeking to leverage deep technical expertise to contribute to high-impact cloud-native initiatives.

---

## EDUCATION

**Bachelor of Commerce (Information technology )**

**June 2019 - July 2022**

The American College

- Specialization in IT Systems and Business Integration
  - Thesis on "The Role of IT in Modern Business Transformation and Automation"
- 

## WORK EXPERIENCE

**Aug 2022 - Present**

**Devops Engineer, Tamuinfotech**

- Designed and implemented a SaaS CI/CD pipeline using GitHub Actions to build, package, and deploy Dockerized applications across isolated Azure VPC environments, reducing deployment time by 60%.
  - Enabled dynamic customer domain provisioning, supporting scalable and secure multi-tenant deployments for 20+ enterprise clients.
  - Engineered a multi-customer infrastructure automation framework using Azure Bicep, integrated into GitHub-based CI/CD pipelines.
  - Reduced manual configuration errors by 95% and accelerated infrastructure provisioning from hours to under 10 minutes per customer.
  - Led the containerization and deployment of applications using Docker and Azure services, improving release frequency by 40% and supporting zero-downtime deployments.
  - Standardized infrastructure as code (IaC) practices across teams using Bicep templates, boosting team efficiency and improving environment consistency for over 20+ projects.
  - Collaborated with cross-functional teams to implement end-to-end DevOps strategies, cutting deployment-related incidents by 30% and increasing delivery confidence across client accounts.
  - Implemented secure DevOps practices including Azure Key Vault integration, RBAC policies, and environment-level isolation, ensuring compliance with client-specific security standards.
- 

## CERTIFICATIONS

- **Microsoft Certified:** Azure Developer Associate (AZ-204) **View Certificate**
- **Microsoft Certified:** DevOps Engineer Expert (AZ-400) **View Certificate**

---

## PROJECTS

### **SaaS Deployment Pipeline with GitHub Actions**

- Designed and implemented an automated CI/CD pipeline using GitHub Actions to build, package, and deploy Dockerized applications to isolated Azure VPC environments.
- Integrated dynamic domain assignment for each customer, enabling secure, scalable, and multi-tenant SaaS deployments across custom domains.

### **Multi-Customer Infrastructure Automation with Bicep**

- Developed a multi-customer infrastructure deployment framework using Azure Bicep templates integrated into the CI/CD pipeline.
- Enabled per-customer environment isolation and customized provisioning, improving deployment consistency and streamlining infrastructure scalability.
